The global Siphonic Roof Rainwater Drainage System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The principle of the Siphonic Roof Rainwater Drainage System is to rely on the design of a special rainwater bucket to separate air and water, so that the rainwater riser is in a full flow state. When the water in the riser reaches a certain capacity, the siphon effect occurs. During rainfall, the entire system is able to remove rainwater from the roof surprisingly quickly due to the continuous siphon action.
