Abstracts

Siphonic toilets are the far more common type of toilet for private and public use and are more common in modern bathrooms as well. They look something like a funnel and waste falls directly into the siphon below the water level or into the outlet and is considered the more hygienic solution. They also reduce unpleasant odors. In addition, siphonic toilets are easier to clean; because more water is involved, contact with the bathroom ceramics is minimized. Because of the shape of the bowl, the flush water can easily take the waste along with it. They also use less water than washdown toilets, since less water is required to carry the waste out into the outlet pipe.
