Abstracts

According to our (Global Info Research) latest study, the global Sitagliptin Sodium market size was valued at US\$ 114 million in 2025 and is forecast to a readjusted size of US\$ 238 million by 2032 with a CAGR of 8.9% during review period.

In 2025, global Sitagliptin Sodium production reached approximately 580,000 units. Sitagliptin Sodium is an oral hypoglycemic agent belonging to the class of dipeptidyl peptidase-4 (DPP-4) inhibitors, primarily used for the treatment of type 2 diabetes mellitus. It works by selectively inhibiting DPP-4 enzyme activity, thereby prolonging the action of endogenous incretins such as glucagon-like peptide-1 (GLP-1). This leads to enhanced insulin secretion and reduced glucagon release, ultimately lowering blood glucose levels. The drug is characterized by stable glucose-lowering effects, a low risk of hypoglycemia, and minimal impact on body weight. It can be used as monotherapy or in combination with other antidiabetic agents. Overall, as a well-established oral antidiabetic drug, sitagliptin sodium plays an important role in the long-term management of type 2 diabetes mellitus.

Sitagliptin Sodium, as one of the classic DPP-4 inhibitors, is primarily used in the treatment market for type 2 diabetes mellitus. With the continuous increase in the global prevalence of diabetes and the acceleration of population aging, the demand for oral hypoglycemic agents has maintained steady long-term growth, providing a solid market foundation for this drug. Owing to its high safety profile, low risk of hypoglycemia, and minimal impact on body weight, sitagliptin sodium has strong clinical reliance among elderly patients and those requiring baseline therapy, and it has long held an important position in the DPP-4 inhibitor market. From a competitive perspective, the antidiabetic drug market is becoming increasingly diversified. New classes of drugs, such as GLP-1

receptor agonists and SGLT2 inhibitors, have demonstrated advantages in glycemic control, weight reduction, and cardiovascular benefits, posing a certain substitution pressure on traditional DPP-4 inhibitors. However, due to its convenient oral administration, good tolerability, and broad applicability, sitagliptin sodium still maintains clear advantages in patients who are not suitable for injectable therapies or who require a higher safety profile.
