This report focuses on site dumper market. A site dumper is a vehicle designed for carrying bulk material, often on building sites, mining operations, agricultural properties, and other industries. It typically consists of a large open skip mounted on wheels, with the ability to tilt the skip to unload its contents. Site dumpers are smaller and have a lower capacity, typically ranging from 1-10t. Site dumpers' compact size makes them more agile, better suited for navigating tight spaces and uneven terrain commonly found on construction sites.

With the continuous development of the global economy, the activities in the construction industry will be also increasing in the future. The demand for site dump at construction sites will be increasing, especially for sites that require frequent material transportation and dumping, such as concrete pouring, earth backfilling, etc. These operations are particularly urgent for site dumps. With the continuous advancement of automobile manufacturing technology, the performance of site dumps has also been significantly improved. Modern site dump not only have strong carrying capacity, but also are flexible in operation and can adapt to various complex working environments.
