According to our (Global Info Research) latest study, the global Six Cylinder Engine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A six-cylinder engine is an internal combustion engine that includes six cylinders. During the working process, the six-cylinder engine pushes the piston down through the energy generated by burning fuel, and then turns the crankshaft through the connecting rod to convert the linear motion of the piston into rotary motion. A six-cylinder engine can produce more power and torque than a four-cylinder engine because it has more cylinders and can burn more fuel in one engine cycle.
