Abstracts

According to our (Global Info Research) latest study, the global Six-Roller Cold Rolling Mill market size was valued at US\$ 219 million in 2025 and is forecast to a readjusted size of US\$ 295 million by 2032 with a CAGR of 3.0% during review period.

In 2025, the global production of six-roller cold rolling mills reached 2,843 units, with an average selling price of 75,000 USD per unit. The global annual production capacity of six-roller cold rolling mills is approximately 5,000 units, and the gross profit margin is about 27.5%. A six-roller cold rolling mill is a type of rolling mill used for cold rolling metal strips, consisting of six rolls, and its notable feature is the use of smaller-diameter work rolls. This design enables the six-roller cold rolling mill to roll thinner and harder materials and achieve better surface quality. The upstream of the six-roller cold rolling mill includes rolling mill frames, roll bearings, variable-frequency motors, etc. The midstream consists of manufacturers of six-roller cold rolling mills, and the downstream is mainly applied in industries such as automotive, metallurgy, and electronics.

Currently, the global market for six-roller cold rolling mills is maintaining a steady development trend, driven mainly by the sustained demand for high-precision and high-performance metal strips from the automotive, electronics, and high-end metallurgy industries. As the manufacturing sector accelerates its transition toward intelligent and green production, the market imposes higher requirements on equipment automation control, operational energy efficiency, and product consistency. Technologically, six-roller cold rolling mills are evolving toward larger scale, higher speed, and greater integration, while expectations for rolling process precision and strip surface quality are becoming increasingly stringent. Meanwhile, market competition is intensifying, with manufacturers generally increasing R&D investments to strengthen

product differentiation and comprehensive service capabilities. Regionally, the industrialisation process in emerging economies offers sustained room for market growth, while mature markets focus more on the upgrading of existing equipment and aftermarket services.
