According to our (Global Info Research) latest study, the global Skate Board market size was valued at USD 149.2 million in 2023 and is forecast to a readjusted size of USD 169.9 million by 2030 with a CAGR of 1.9% during review period.

A skateboard is a type of sports equipment used for skateboarding. It is usually made of a specially designed 7–8-ply maple plywood deck and has polyurethane wheels attached to the underside by a pair of skateboarding trucks.

The skateboarder moves by pushing with one foot while the other foot remains balanced on the board, or by pumping one's legs in structures such as a bowl or half pipe. A skateboard can also be used by standing on the deck while on a downward slope and allowing gravity to propel the board and the rider. If the rider's leading foot is their right foot, they are said to ride 'goofy'. The two main types of skateboards are the longboard and shortboard. The shape of the board is also important: the skateboard must be concaved to perform tricks.
