Consumer goods are products which are intended for everyday private consumption. They cover a large product portfolio including food and non-food categories. They can be further classified into fast moving consumer goods (FMCG) and slow moving consumer goods (SMCG). The definitions are based on how frequently products are sold to the customer, a determining factor in the rotation of goods. FMCG products have a useful life shorter than a year and are, therefore, products bought relatively frequently with recurring expenditure. This includes categories such as food and beverages, personal care, cleaning products, apparel and footwear, tobacco and pet food/pet care. SMCG products have a useful life longer than a year, comprising items such as household appliances, furniture and home improvement products. These items have a lower sales frequency and are not rotating as rapidly as FMCG.
