A ski suit is a specialized outfit designed to provide protection and comfort to individuals participating in winter sports, particularly skiing. Ski suits are designed to keep skiers warm, dry, and protected from the cold, wind, and snow while allowing for a full range of motion. They are typically made of high-performance materials and feature specific design elements to suit the demands of skiing.

Ski suits are insulated to provide warmth in cold, snowy conditions. The level of insulation can vary, and some suits have removable or adjustable layers to accommodate different weather conditions. And they are made from waterproof and breathable fabrics to keep skiers dry in wet and snowy conditions while allowing sweat and moisture to escape. The seams of the suit are often sealed to prevent water from entering through stitching. They feature waterproof zippers and ventilation options to help regulate body temperature. These can include underarm vents and thigh vents to release heat when needed.

Ski suits are an essential component of a skier's gear, providing both protection and comfort in the challenging winter conditions encountered on the slopes. The design and features of a ski suit aim to enhance the skiing experience while keeping the skier warm and dry.
