The global Skimmed Evaporated Milk market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Evaporated milk can be made from whole milk or skim milk. In either case, the milk is homogenized and then the water is removed by gently heating it. The evaporated milk product is sealed in cans which are then heated to kill any bacteria in the milk. Thus evaporated milk is actually sterile, which, combined with the fact that it is stored in airtight cans, gives it an extremely long shelf life.
