## Abstracts

The global Skin Boost market size is expected to reach \$ 848 million by 2032, rising at a market growth of 11.3% CAGR during the forecast period (2026-2032).

A skin booster is an injectable skin rejuvenation treatment that involves injecting a hydrating, gel-like substance, typically hyaluronic acid (HA), into the upper layers of the dermis to improve the skin's overall quality. It enhances hydration, texture, and elasticity, and can also stimulate collagen and elastin production, making skin look more plump and youthful. This treatment is often used to address dullness, dryness, and fine lines on the face, neck, hands, and décolletage.

Global production of skin boosters is projected to reach 12.8 million units by 2025, with an average price of \$30.8 per unit.
