According to our (Global Info Research) latest study, the global Skin Microbiome Modulator market size was valued at USD 596.6 million in 2023 and is forecast to a readjusted size of USD 1713.6 million by 2030 with a CAGR of 16.3% during review period.

Microbiome modulation enables us to select and combine beneficial bacteria within skincare products in order to rebalance a diseased skin microbiome. Microbiome forms an integral part of any human being. The presence is of paramount importance in all cavities of the human body and on our skin. Skin microbiome keep the organ from malfunctioning and assist in a variety of functions like sweat production, temperature maintenance among others. For years, the microbiome has been targeted as a source of potential infection by personal care products. But focus is shifting from working against them to working with them. A modulation of the skin microbiome works by inserting genes that activate a counter response to damage by external factors like excessive sunlight and dust.

Global key skin microbiome modulator manufacturers include L'Oréal S.A., Unilever, The Estée Lauder Companies etc. The top 3 companies hold a share about 27%. Americas is the largest market, with a share about 33%, followed by APAC and Europe with the share about 32% and 26%.
