Abstracts

Electronic devices intended to optimize and improve skincare regimens are called as skincare devices. These devices are used for the disease diagnosis, hair removal, skin rejuvenation and resurfacing, acne, scar, and tattoo removal, and in other skincare procedures. The treatment devices segment is further divided into light therapy devices, lasers, electrosurgical equipment, liposuction devices, microdermabrasion devices, and others.

According to our (Global Info Research) latest study, the global Skincare Treatment Devices market size was valued at US\$ 9080 million in 2023 and is forecast to a readjusted size of USD 18000 million by 2030 with a CAGR of 10.2% during review period.

Surge in prevalence of skin diseases drives the demand for diagnostic and treatment devices. For instance, according to American Academy of Dermatology Association (AAD), about 50 million peoples are affected by acne in the U.S. every year. Thus, rise in incidence of acne has led to a surge in demand for skincare devices such as LED therapy masks and blue light devices, which reduce inflammation. Further, growth of the skincare devices market is expected to be driven by increase in popularity and adoption of home-based skincare devices, rise in disposable income, and surge in emphasis on the skin health.
