Slant Well Drilling Service is a specialized drilling technique used in the oil and gas industry to intentionally deviate or change the direction of a wellbore from the vertical orientation.

Slant Well Drilling Service involves controlling the inclination of the wellbore at different angles to the vertical. This control is achieved through specialized drilling equipment and techniques.Directional drilling tools, such as downhole mud motors, rotary steerable systems, and measurement-while-drilling (MWD) equipment, are used to control and steer the drill bit in the desired direction.Directional drilling plans include measures to avoid collisions with existing wellbores, geological faults, or other subsurface structures.
