According to our (Global Info Research) latest study, the global SLD Light Source market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The SLD (Super Luminescent Diode) light source is a light source that combines the advantages of laser and light emitting diode, featuring wide spectrum, high brightness and low coherence.

SLD light sources utilize electron recombination effects in semiconductor materials to generate light. Different from traditional light-emitting diodes (LEDs), SLD light sources introduce a light-reflecting layer or a light-enhancing structure between the active and inactive layers. This design enables the SLD light source to simultaneously generate stimulated emission and spontaneous emission, thereby obtaining a broad-spectrum light output. The characteristics of SLD light sources include: wide spectrum, high brightness, low coherence, and wide application.
