Abstracts

The sleeve and the disc of the sleeve regulating valve are in clearance fit, and there are multiple throttling windows on the sleeve. The shape of the window determines the flow characteristics of the regulating valve, and the size of the window area affects the flow coefficient Cv of the regulating valve. The valve seat adopts a self-centering non-thread snap-in structure. The conical sealing surface on the valve seat cooperates with the conical sealing surface on the valve disc to form a cut-off sealing pair, which ensures that the valve is tightly closed when the valve disc is pressed tightly on the valve seat.
