A Sleeve Type Sealer is a packaging machine used to wrap products with a sleeve of shrink film, often in preparation for heat shrink wrapping. The machine partially seals the product by creating a film 'sleeve' around it, leaving the ends open. This sleeve is then passed through a heat shrink tunnel, where the film shrinks tightly around the product, providing a secure and protective wrapping. It's widely used for bundling products, providing protection, and facilitating bulk packaging in industries like food, beverages, and consumer goods.
