Slide and cassette printers are devices used to print identification information on microscope slides and tissue cassettes. A cassette and slide printer reduce errors, and facilitate efficient workflow in the histology laboratory. A cassette printer is a machine used in histology to print labels onto tissue cassettes, which are small containers used to hold tissue samples during processing and storage. The labels typically include information such as the patient's name, the type of tissue, and the date. A slide printer is a machine used to print labels onto microscope slides, which are thin glass or plastic sheets used to hold tissue samples for examination under a microscope. Like cassette printers, slide printers are used to add labels with information such as the patient's name, the type of tissue, and the date to the slides.
