Sliding table molding machine is an efficient and flexible injection molding equipment, mainly divided into two types based on the number of sliding table: single sliding table injection molding machine and double sliding table injection molding machine. Single sliding table models are usually equipped with one or more sets of molds to achieve simultaneous operation of taking and inserting parts during the sliding of the sliding table, improving production efficiency. The double sliding table model adds a sliding table on top of the single sliding table, doubles the number of molds placed, and significantly improves injection efficiency compared to the single sliding table model.
