The global Slip Ring Torque Sensors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Slip Ring Torque Sensor refers to a torque sensor based on a slip ring. Integrated slip ring assemblies are used to transmit electrical signals from rotating electronic equipment to stationary electronic equipment. Slip rings generally consist of silver graphite brushes that rub against a rotating ring to provide an electrical path for input excitation and output signal voltages. Typically used for individual, random checks or torque measurements performed at low speeds.
