According to our (Global Info Research) latest study, the global Slip Ring Torque Transducers market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Slip Ring Torque Transducer refers to a torque sensor based on a slip ring. Integrated slip ring assemblies are used to transmit electrical signals from rotating electronic equipment to stationary electronic equipment. Slip rings generally consist of silver graphite brushes that rub against a rotating ring to provide an electrical path for input excitation and output signal voltages. Typically used for individual, random checks or torque measurements performed at low speeds.
