A Slop Treatment System is a specialized setup used to process and treat slop, which is a mixture of waste fluids, oils, water, and solids generated from maritime operations, such as drilling and shipping. These systems employ various technologies like separation, filtration, and chemical treatment to segregate and remove contaminants, enabling the recovery of reusable oil and clean water while safely disposing of or neutralizing hazardous waste. By efficiently managing and treating slop, these systems help maritime and offshore operations comply with environmental regulations, reduce waste disposal costs, and minimize their ecological footprint.
