The global Slow Rebound Sponge market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A Slow Rebound Sponge, also known as a memory foam sponge, is a type of material that is designed to conform to the shape of an object or body when pressure is applied. It is called 'slow rebound' because it takes a bit of time for the sponge to return to its original shape after the pressure is released. This unique characteristic makes it ideal for use in mattresses, pillows, seat cushions, and various other applications where comfort and support are desired. The slow rebound sponge provides an even distribution of weight and pressure, thereby relieving stress and promoting better circulation.
