Abstracts

The global SLS 3D Printing Services market size is expected to reach \$ 1068 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

To address the problems of traditional manufacturing, such as reliance on molds for complex structure forming, long production cycles, significant material waste, and high design iteration costs, SLS 3D printing services have emerged. Currently, SLS 3D printing services have developed into an advanced technology system encompassing CO₂ laser/fiber laser dual-wavelength systems, multi-material powder mixing and sintering, and closed-loop temperature control, and are widely used in aerospace fuel nozzles, automotive intake manifolds, medical implants, consumer goods, and mold manufacturing.
