The Sludge Low Temperature Condensation Drying Equipment is a device that uses a closed hot air circulation condensation process to dry sludge at low temperatures. It achieves stabilization, harmlessness, and reduction of sludge through heat pump heating technology, heat recovery and utilization technology, and gradient heating and cooling technology. During the operation of the equipment, the moisture in the sludge absorbs heat and vaporizes, and the generated water vapor is collected and discharged through condensation dehumidification, thereby achieving the purpose of sludge drying and dewatering.
