According to our (Global Info Research) latest study, the global Sludge Mixers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A sludge mixer is to optimize the mixture of organic and inorganic flocculants and watery suspensions with different concentration. The mixer can also be mounted in which different media streams to be mixed before the flocculant is added. Flocculant added immediately before the mixer via a tangential injektorring with nozzles and mixed to a homogeneous suspension. Flocculation reaction which occurs immediately after the flocculation agent addition is significantly affected by the energy (turbulence) that occurs in the mixer.
