Sludge scraper systems are mechanical systems widely used in water treatment plants and wastewater treatment facilities to scrape and collect deposited sludge from areas such as settling tanks and sludge tanks. These systems typically consist of scrapers, drives and collection devices, etc., which are mechanically or electrically driven to scrape sludge from the bottom of the tank to a centralized collection point for subsequent treatment or transportation. The design of the sludge scraper system can be customized according to the size of the tank and the amount of sludge, which has the advantages of high efficiency, reliability and easy maintenance, and can effectively improve the efficiency of sewage treatment.
