## Abstracts

Sludge Treatment Incinerators are specialized facilities designed to thermally treat and dispose of sewage sludge or other types of industrial sludge. These incinerators use high temperatures to reduce the volume of sludge and destroy pathogens, organic compounds, and potentially toxic substances present in it. The process typically involves drying the sludge first and then burning it in a controlled environment, which results in a significant reduction of the original mass and volume of the waste material.

According to our (Global Info Research) latest study, the global Sludge Treatment Incinerators market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
