Abstracts

Slurry separators are devices employed in different environments that help separate various solid-liquid mixtures into solid phase and liquid phase. Slurry separators widely used in livestock manure treatment, biogas plants and some other light industries related to agricultural products, such as paper pulp, vinasse and pomace.

Scope of the Report:

This report focuses on the Slurry Separator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. At present, in developed countries, the slurry separator industry is generally at a more advanced level. The world's largest enterprises are mainly scattered around Europe. Along with that, the state-of-art equipment, R & D capability, and leading techniques are also held in those European companies' hands.

China's slurry separator industry is still quite undeveloped. Although China is the largest livestock production country in the world, large-scale farming is still at a very low level. There are many Chinese manufacturers producing slurry separation machines. However, most of them cannot withstand a single blow from the European products when it comes to quality and reliability.

The worldwide market for Slurry Separator is expected to grow at a CAGR of roughly 1.4% over the next five years, will reach 680 million US\$ in 2023, from 620 million US\$ in 2017, according to a new GIR (Global Info Research) study.
