The mud spreader is a kind of mechanical equipment used for fertilization and sowing, mainly used in agriculture, horticulture and forestry and other fields. The machine puts fertilizer and seeds into the hopper in the machine, and then uses rotating rollers or chains to scatter the fertilizer or seeds to achieve fast and uniform fertilization or sowing. The mud spreader usually has a certain degree of mobility and can be installed on a tractor or other agricultural vehicles to facilitate movement and fertilization in the field. They can also be adjusted as needed to accommodate the application needs of different types of fertilizers and seeds, improving fertilization and planting efficiency. The advantages of the mud spreader include uniform fertilization or sowing, labor saving, high efficiency, and convenient operation, etc., making it one of the indispensable equipment in agricultural production.
