Abstracts

Electro-pneumatic actuators are often considered a cost-effective alternative to electromechanical and electrohydraulic actuators. This makes them best suited to lower-power applications. Electro-pneumatic actuators are widely used to automate a number of areas of industrial applications, from production to assembly and packaging systems.

With electro-pneumatic actuators, the pneumatic components are controlled by electrical components including sensors, switches and industrial computer systems. The use of electric components replaces the manual control that was traditionally used in pneumatic systems.

According to our (Global Info Research) latest study, the global Electropneumatic Actuators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
