According to our (Global Info Research) latest study, the global SMA Linear Actuator market size was valued at US\$ 68.9 million in 2024 and is forecast to a readjusted size of USD 160 million by 2031 with a CAGR of 12.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An SMA (Shape Memory Alloy) linear actuator is a type of actuator that uses the unique properties of shape memory alloys to produce linear motion. These alloys, typically composed of nickel and titanium, change shape when heated, allowing them to expand or contract in response to electrical input. When an electric current passes through the SMA wire or element, it heats up and undergoes a phase change, causing it to contract and generate linear force. SMA linear actuators are compact, lightweight, and noiseless, making them ideal for applications in robotics, medical devices, aerospace, and automotive systems, where precise, efficient, and quiet actuation is required. Their ability to convert electrical energy into mechanical motion with minimal external moving parts offers advantages in terms of reliability and design flexibility.
