Abstracts

The global Small Animal Magnetic Resonance Imaging Facility market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to survey data, the global market for experimental animals has shown a steady upward trend in recent years, from US\$10.3 billion in 2015 to US\$17.7 billion in 2021, with a compound annual growth rate of about 9.4%. Among them, mice are the most widely used species, and their market size in 2021 is about 9 billion US dollars, which is more than half. The upstream of the small animal magnetic resonance imaging equipment industry chain includes equipment manufacturers and R&D institutions, and the downstream includes hospitals, scientific research institutions, and universities. At present, many companies at home and abroad have made plans in the field of small animal magnetic resonance imaging equipment. As people pay more and more attention to health, basic research in life sciences has also attracted increasing attention. As an essential scientific instrument for life science research, small animal magnetic resonance imaging equipment still has broad development prospects in the future.

Small Animal Magnetic Resonance Imaging Facility is equipped with surface coils and body coils of different sizes to meet the head and body imaging needs of rats and mice, and is mainly used for small animals in the fields of routine pharmaceutical, biomedical and molecular imaging research (such as Rats, mice, rabbits, monkeys), widely used to study the tissue morphology, pathological changes, and metabolism of animals and animal models of various diseases. The device can be used for in vivo imaging research of rats, mice, rabbits and monkeys, and realizes high-resolution magnetic resonance

imaging of small animals. The Small Animal Magnetic Resonance Facility has 9.4-T, 4.7-T and 11.74-T magnetic resonance imaging (MRI) systems with significantly higher field strengths than those commonly found in clinical systems, resulting in enhanced spatial or temporal resolution of imaging rate, and improves the accuracy of resonance amplitude and frequency estimation for spectroscopy.
