Small Automotive Aluminum Extrusion refers to compact aluminum profiles used in automotive structural, thermal, decorative, and functional components. It supports lightweight design, corrosion resistance, dimensional stability, and flexible cross-section forming in electric vehicles, traditional vehicles, body systems, battery frames, and interior or exterior parts.

The industrial chain includes upstream aluminum billets, alloying elements, extrusion dies, lubricants, heat treatment equipment, and surface treatment chemicals. Midstream covers billet heating, extrusion, cutting, aging, machining, surface finishing, and inspection. Downstream applications mainly include vehicle body parts, battery trays, crash structures, trim parts, seat systems, and thermal management components.

Automotive lightweighting and new energy vehicle development boost the demand for small automotive aluminum extrusion parts. These profiles feature light weight, high strength and easy processing, widely used in vehicle body and interior structural components. Precision forming and surface treatment technology keep improving product matching accuracy.
