## Abstracts

The global Small Capacity Electric Double Layer Capacitor market size is expected to reach \$ 1899.2 million by 2029, rising at a market growth of 13.5% CAGR during the forecast period (2023-2029).

A supercapacitor, also known as an electric double-layer capacitor, is a special type of capacitor that exhibits properties between conventional capacitors and rechargeable batteries. Unlike batteries that store charge through chemical reactions, supercapacitors store charge by adsorbing ions on the surface of activated carbon electrodes immersed in an electrolyte, forming an electric double layer. As a result, while batteries require hours to charge, supercapacitors can be charged in a matter of seconds. Furthermore, unlike batteries that have limited charging cycles, supercapacitors are theoretically unlimited in their cycle life.
