In 2025, the global production capacity of Small Capsule Slip Rings was approximately 7.50 million units.

Small Capsule Slip Rings are compact electromechanical components used to transmit power, signals, or data between stationary and rotating structures. They are designed for limited installation space and are widely used in surveillance cameras, medical devices, robotics, automation equipment, rotating sensors, packaging machinery, and small precision motion systems.

The industrial chain of Small Capsule Slip Rings covers upstream components such as precious metal contacts, copper rings, engineering plastics, bearings, wires, insulation materials, housings, connectors, and lubricants. The midstream consists of precision machining, contact assembly, wiring, insulation processing, signal testing, durability testing, and packaging. Downstream applications mainly include security equipment, medical instruments, industrial automation, robotics, aerospace devices, packaging machinery, and rotating electronic systems.

Miniaturized intelligent equipment, robot joints and precision monitoring devices boost

the demand for small capsule slip rings. They realize stable power and signal transmission in rotating structures with compact size and low friction. Sealed anti-dust structure improves reliability in precision equipment operation.
