Abstracts

Small molecule prefilled syringes are pharmaceutical preparations of small molecule drugs that are sold in prefilled syringes. Small molecule prefilled syringes are alternatives to other dosage forms such as tablets and capsules. Empty glass or plastic and polymer syringes are filled with the solution of the active pharmaceutical ingredients.

Drugs belonging to categories such as cardiovascular, analgesics, neurology, and adjuvants are offered in prefilled syringe delivery systems. Small molecule prefilled syringes have faster therapeutic action as compared to tablets and capsules, as drug directly enters into the bloodstream.

Moreover, self-administration can be done with the help of these products, which is convenient for the patients.

According to our (Global Info Research) latest study, the global Small Molecule Prefilled Syringes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Development of technologically advanced prefilled syringes is expected to boost demand for small molecule prefilled syringes
