## Abstracts

According to our (Global Info Research) latest study, the global Small Molecules Drugs for Inflammatory Bowel Diseases (IBDs) market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Small molecule drugs for Inflammatory Bowel Diseases (IBDs), such as Crohn's disease and ulcerative colitis, are oral medications designed to target and modulate the underlying inflammatory processes associated with these chronic conditions. Unlike biologic therapies, which are typically larger proteins, small molecules can easily penetrate cells and affect various biochemical pathways. Key examples include tofacitinib, a JAK inhibitor that reduces inflammation by inhibiting the Janus kinase pathway, and ozanimod, an S1P receptor modulator, helps prevent immune cell migration to the gut, further alleviating inflammation.
