Abstracts

According to our (Global Info Research) latest study, the global Small Motor Gliders market size was valued at US\$ 514 million in 2025 and is forecast to a readjusted size of US\$ 990 million by 2032 with a CAGR of 9.8% during review period.

A Small Motor Glider is a fixed-wing aircraft equipped with an engine and propeller that allows it to take off and climb under its own power, but which is also capable of sustained soaring flight without engine power. Under international aviation standards (such as EASA or FAA), they are typically categorized as 'Touring Motor Gliders' (TMG) or 'Self-Launching Sailplanes.' The engine is often designed to be retracted into the fuselage or feathered during gliding to minimize aerodynamic drag. This hybrid capability provides pilots with the independence of a powered airplane while maintaining the aerodynamic efficiency and silent flight experience characteristic of a traditional sailplane.

In 2025, global Small Electric Glider production reached approximately 10,000 units, and average price was 50,000 USD/unit.
