## Abstracts

The global Small and Medium Articulated Robot market size is expected to reach \$ 7131 million by 2032, rising at a market growth of 10.0% CAGR during the forecast period (2026-2032).

Small and Medium Articulated Robots are multi-joint industrial robotic arms, typically with 4–6 axes and payload capacities ranging from light-duty to mid-range loads, designed to perform flexible, high-precision, and repeatable operations such as handling, assembly, welding, and inspection, widely used in automated production lines where space efficiency, speed, and cost-performance balance are critical.

The small and medium articulated robot industry chain begins upstream with suppliers of servo motors, reducers, controllers, encoders, sensors, bearings, cables, and structural materials, continues midstream with robot manufacturers conducting mechanical design, kinematic optimization, control algorithm development, system integration, assembly, calibration, and testing, and extends downstream to system integrators, automation solution providers, equipment OEMs, and end-user manufacturers in automotive, electronics, battery, metalworking, and general industrial automation applications worldwide.

Projects under construction and planned in the small and medium articulated robot market mainly include expansion of robot assembly and testing lines, construction of intelligent manufacturing bases, localization projects for servo motor and reducer production, upgrades of digital twin and simulation laboratories, establishment of R&D centers focusing on high-speed motion control and AI vision integration, and joint automation projects between robot manufacturers, system integrators, and end-user factories in automotive, electronics, and new energy sectors.
