The global Small Ni-MH Battery market size is expected to reach \$ 474 million by 2032, rising at a market growth of -0.2% CAGR during the forecast period (2026-2032).

Small Ni-MH Battery is a rechargeable power cell that utilizes nickel-metal hydride (Ni-MH) chemistry. It is characterized by its compact size and is commonly used in various small electronic devices such as digital cameras, remote controls, cordless phones, portable audio players, and electronic toys. These batteries are known for their ability to be recharged multiple times, making them a popular choice for applications where a compact, rechargeable power source is required. They operate based on the electrochemical reactions between nickel oxyhydroxide and a metal hydride alloy. The small size, rechargeable nature, and reasonable energy density make Small Ni-MH Batteries suitable for a wide range of portable electronic devices.

In terms of manufacturers, the market concentration of Small Ni-MH Battery is high, and major companies have consolidated their market position through technological innovation and cost control. From the market point of view, the core manufacturers of Small Ni-MH Battery mainly include Highpower Technology, Corun, FDK, Panasonic and GP Batteries. These companies occupy an important position in technology research and development, production capacity and market share.

The Asia-Pacific region is the main consumer market for Small Ni-MH Battery, with a market share of 50.15% in 2025. The strong demand in this region is mainly due to its wide application in electronic products, household appliances and power tools. In addition, the Asia-Pacific region has a strong manufacturing base, and many large electronic product manufacturers and battery manufacturers have set up factories here, further promoting the growth of the market.

However, with the continuous development and promotion of lithium-ion battery technology, the market demand for Small Ni-MH Battery is also facing challenges. The advantages of lithium-ion batteries in energy density, weight and charging speed have enabled them to gradually replace Ni-MH Battery in many applications. Nevertheless, NiMH batteries still remain competitive in certain specific areas due to their good safety and stability, especially in equipment that requires long-term use and high safety, such as medical equipment and high-end power tools.

Although the Small Ni-MH Battery market faces competition from lithium-ion batteries, there are still multiple factors that will drive its future development. First, with the advancement of technology, the energy density and performance of Ni-MH Battery will continue to improve, which will help it occupy a more advantageous position in the competition. Secondly, the increasingly stringent environmental regulations make the environmental advantages of Ni-MH batteries more prominent. The recycling and reuse technology of Ni-MH Battery is constantly developing, which will further enhance its competitiveness in the green economy. Consumers' attention to environmentally friendly products is also prompting manufacturers to pay attention to the sustainability of their products, thereby driving the market towards a more environmentally friendly direction.
