## Abstracts

The global Small Nucleic Acid Drug market size is expected to reach \$ 15230 million by 2029, rising at a market growth of 20.3% CAGR during the forecast period (2023-2029).

The Small Nucleic Acid Drug Market is driven by the transformative potential of small nucleic acids, including microRNA, aptamers, and small interfering RNA (siRNA), in treating a wide spectrum of diseases, from genetic disorders to cancer and viral infections. These therapies harness the power of small nucleic acids to modulate gene expression, inhibit specific targets, and diagnose diseases, offering a precise and personalized approach to treatment. As genomics and RNA-based research advance, and precision medicine gains prominence, the demand for small nucleic acid drugs continues to surge. Innovations in nucleic acid design, delivery systems, and gene-editing technologies further contribute to market expansion. Nevertheless, a significant challenge for this market is the need to overcome hurdles related to safe and efficient drug delivery, minimize off-target effects, ensure long-term safety and efficacy, and navigate complex regulatory pathways. Addressing delivery challenges, optimizing pharmacokinetics, and managing development costs are ongoing hurdles. Additionally, the market faces competition from traditional therapeutic approaches, necessitating continuous research and development efforts to unlock the full therapeutic potential of small nucleic acid drugs. Striking a balance between providing safe, effective, and accessible small nucleic acid therapies while addressing scientific and regulatory challenges is paramount for the continued growth of the Small Nucleic Acid Drug Market.

Small nucleic acid drugs, such as siRNA, ASO, miRNA, Aptamer, etc., function based on the RNAi process and offer various advantages, including unlimited target druggability, high specificity, long half-life, faster and more efficient design, development

and production process.
