According to our (Global Info Research) latest study, the global Small Satellite Propulsion System market size was valued at US\$ 437 million in 2025 and is forecast to a readjusted size of US\$ 570 million by 2032 with a CAGR of 3.9% during review period.

The small satellite propulsion system is a device used to provide the force and torque required to change the orbit of a small satellite and maintain the satellite's pointing change. This system essentially uses the working fluid carried by the satellite and uses the reaction principle to enable the satellite to obtain external forces to change its own state. The small satellite propulsion system is mainly used to maintain the orbital altitude of the satellite and avoid orbit descent. It is also used to adjust the attitude to maintain the stability of the satellite.
