Abstracts

According to our (Global Info Research) latest study, the global Small Size All-electric Injection Molding Machine market size was valued at US\$ 232 million in 2025 and is forecast to a readjusted size of US\$ 323 million by 2032 with a CAGR of 4.9% during review period.

To address the issues of high energy consumption, high noise, pollution risks (oil leakage), insufficient repeatability, and slow response speed of traditional small hydraulic injection molding machines in the field of high-precision micro-part molding, small size all-electric injection molding machines utilize fully closed-loop servo motor drive and digital control technology to achieve millisecond-level precise control of injection speed, pressure, and position. This meets the stringent requirements of high-value-added industries such as medical, electronics, and precision gears for ultra-clean environments, extreme precision, and energy-saving production. The demand primarily stems from the rigid requirements of downstream industries such as precision electronics, medical consumables, optical devices, and micro-connectors for ultra-precision, micro-sized plastic parts. These industries require clean production environments, micron-level molding precision, and short production cycles. The upstream supply chain heavily relies on suppliers of high-performance servo motors, precision ball screws/guides, high-end motion controllers, and high-rigidity special alloy steel from Japan and Germany. The core of this approach is achieving millisecond-level response and nanometer-level repeatability through the integration of top-tier electromechanical components. The downstream supply chain is concentrated in advanced precision manufacturing industries with stringent requirements for miniaturization, high precision, and production environments. This mainly includes medical consumables and devices (such as syringes and microfluidic chips), electronic

components (such as connectors and sensor housings), optical components (such as lens mounts), and automotive electronics (such as precision gears). In 2025, the production volume of small size all-electric injection molding machines is estimated at approximately 15,000 units, with an average price of approximately US\$15,000 per unit, a gross profit margin of approximately 35%, and a single-line capacity of 200 units per year.
