Small surgical drapes are sterile, flexible fabrics used to cover specific areas of a patient's body during surgery, typically the surgical site and surrounding skin. These drapes are smaller in size compared to full-body surgical drapes and are designed to isolate and maintain the sterility of the operative area. They often come with adhesive edges to ensure proper placement and to minimize the risk of contamination. Small surgical drapes help create a sterile field, providing a clean, controlled environment for the surgeon to perform the procedure. They are commonly used in minor surgeries or when covering smaller anatomical regions.
