According to our (Global Info Research) latest study, the global Small Turbine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Small wind turbines, also known as micro wind turbines, generate electricity for small-scale use. These turbines are usually smaller than those found in wind farms. Small wind turbines usually have a passive yaw system rather than an active one. They use a direct drive generator and use a tail fin to point into the wind, whereas larger turbines have a geared power system that actively points into the wind.
