Abstracts

The global Small Turbine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Small wind turbines, also known as micro wind turbines, generate electricity for small-scale use. These turbines are usually smaller than those found in wind farms. Small wind turbines usually have a passive yaw system rather than an active one. They use a direct drive generator and use a tail fin to point into the wind, whereas larger turbines have a geared power system that actively points into the wind.

This report studies the global Small Turbine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Small Turbine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Small Turbine that contribute to its increasing demand across many markets.
