Abstracts

The global Small Underwater Robots market size is expected to reach \$ 260 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

Small Underwater Robots refer to compact robotic systems designed to operate underwater in limited-scale environments such as pools, lakes, rivers, or shallow coastal areas. They are typically lightweight, portable, and capable of remote control or semi-autonomous operation. These robots are used for tasks such as underwater inspection, environmental monitoring, exploration, and photography. Compared with larger industrial underwater vehicles, small underwater robots have lower payload capacity, limited endurance, and reduced depth capability, but they offer advantages in flexibility, cost-effectiveness, and ease of deployment.

In 2025, sales of Small underwater robots reached 75,000 units, with a unit price of \$1,700 and a gross margin of 40%.

This report studies the global Small Underwater Robots production, demand, key manufacturers, and key regions.
