Abstracts

The global Smart Agriculture Project market size is expected to reach \$ 6925 million by 2032, rising at a market growth of 10.3% CAGR during the forecast period (2026-2032).

The Smart Agriculture Project represents an innovative approach to agricultural development, integrating modern information technologies such as the Internet of Things (IoT), big data, cloud computing, and artificial intelligence to achieve intelligent monitoring and management of the entire agricultural production process. By installing sensors, smart devices, and other hardware facilities, this project collects real-time data from the agricultural production environment. Utilizing data processing and analysis software, it provides farmers with scientific decision-making support for precision farming, intelligent irrigation, pest and disease early warning, and more. The implementation of the Smart Agriculture Project not only enhances agricultural production efficiency and quality but also promotes the rational utilization of agricultural resources and the improvement of the agricultural ecological environment, making it a crucial direction for the development of modern agriculture.

Smart agriculture projects are expected to evolve toward digitalization, intelligence, IoT integration, and data-driven management. They will focus on real-time collection of farmland environmental data, crop growth status, and soil conditions using IoT sensors, drones, satellite remote sensing, and ground monitoring devices, combined with big data analytics, artificial intelligence, and cloud platforms to enable precision irrigation, fertilization management, pest and disease early warning, yield forecasting, and agricultural machinery scheduling optimization. Future smart agriculture projects will emphasize efficient resource and energy utilization, sustainability, and environmental protection, integrating farm management systems, supply chain management, and traceability platforms to enhance productivity, reduce risk, and support agricultural

insurance and policy decision-making.
