The global Smart Building Operating Systems market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Smart Building Operating Systems (BOS) refer to software platforms that integrate various building systems and components into a single, centralized platform that enables intelligent management and control of a building's operations. This includes systems such as HVAC, lighting, security, access control, and energy management.

The goal of a Smart Building Operating System is to improve building efficiency, reduce energy consumption, and enhance occupant comfort and safety. By integrating all building systems and components into a single platform, BOS allows building managers and operators to monitor and control building operations more effectively and efficiently, often in real-time.

Smart Building Operating Systems leverage various technologies such as the Internet of Things (IoT), sensors, machine learning, and data analytics to collect and analyze data from various building systems, identify patterns and trends, and optimize building operations. This can result in significant cost savings for building owners and managers, as well as improved occupant satisfaction.

Overall, Smart Building Operating Systems are becoming increasingly important in the management and operation of modern buildings, as they offer a more streamlined and efficient approach to building management, maintenance, and control.
